REMARKS/ARGUMENTS

Favorable reconsideration of this application as presently amended and in light of the following discussion is respectfully requested.

Claims 1-20 are presently pending in this case. Claims 1, 3, 6, and 8 are amended and new Claims 13-20 are added by the present amendment. As amended Claims 1, 3, 6, and 8 and new Claims 13-20 are supported by the original disclosure, 1 no new matter is added.

In the outstanding Official Action, Claim 1 was rejected under 35 U.S.C. §101; Claim 1 was rejected under 35 U.S.C. §112, second paragraph; Claims 1, 2, 5, 6, 9, and 11 were rejected under 35 U.S.C. §102(b) as anticipated by <u>Garib</u> (U.S. Patent No. 6,728,378); Claims 3 and 4 were rejected under 35 U.S.C. §103(a) as unpatentable over <u>Garib</u> in view of <u>Kaufman et al.</u> (U.S. Patent No. 5,764,772, hereinafter "<u>Kaufman</u>"); Claim 7 was rejected under 35 U.S.C. §103(a) as unpatentable over <u>Garib</u> in view of <u>Kitamura</u> (U.S. Patent Application Publication No. 20020016917); Claim 8 was rejected under 35 U.S.C. §103(a) as unpatentable over <u>Garib</u> in view of <u>Kaufman</u>; Claim 10 was rejected under 35 U.S.C. §103(a) as unpatentable over <u>Garib</u> in view of <u>Schneier</u> (Applied Cryptography, Second Edition); and Claim 12 was rejected under 35 U.S.C. §103(a) as unpatentable over <u>Garib</u> in view of <u>Inada</u> (U.S. Patent No. 6,986,044).

With regard to the rejection of Claim 1 under 35 U.S.C. §101, Claim 1 is amended to recite "public key encryption processing means for performing an encryption operation on data using a public key encryption technique to generate encrypted data." The generation of encrypted data by the public key encryption processing means is respectfully submitted to be a useful, concrete, and tangible result. Accordingly, it is respectfully submitted that Claims 1-12 are in compliance with all requirements under 35 U.S.C. §101.

¹See, e.g., the specification at page 37, lines 2-21.

With regard to the rejection of Claim 1 under 35 U.S.C. §112, second paragraph,

Claim 1 is amended to recite "control means for controlling the hash value generation means
and the public key encryption processing means, the control means suppressing arithmetic
operations performed by the public key encryption processing means when the hash value
generation means accesses the storage means." Thus, the phrase "other arithmetic
operations" is no longer used. Accordingly, it is respectfully submitted that Claims 1-12 are
in compliance with all requirements under 35 U.S.C. §112, second paragraph.

With regard to the rejection of Claim 1 as anticipated by <u>Garib</u>, that rejection is respectfully traversed.

Amended Claim 1 recites in part, "control means for controlling the hash value generation means and the public key encryption processing means, the control means suppressing arithmetic operations performed by the public key encryption processing means when the hash value generation means accesses the storage means."

Garib describes a secret key messaging apparatus that securely transmits and receives electronic mail. Garib describes that a hashing algorithm may be used to determine if a received message has been tampered with.² Further, information may be encrypted with secret-key or symmetric-key encryption.³ In this regard, Garib describes a statement issuing computer system 101 that includes a password providing means 107 that applies a password hashing algorithm to a password.⁴ Statement issuing computer system 101 of Garib also includes message preparation means 112 that encrypts an electronic mail message.⁵ However, there is no teaching or suggestion in Garib for any device that suppresses arithmetic operations performed by the message preparation means 112 when the password providing means 107 accesses data storage. The portion of Garib cited for this feature in the

²See <u>Garib</u>, column 3, lines 46-52.

³See Garib, column 4, lines 27-42.

⁴See Garib, column 11, lines 37-40.

⁵See <u>Garib</u>, column 12, lines 16-21.

outstanding Office Action, column 4, lines 9-26, only describes that hash vales can be used to protect passwords. This portion of <u>Garib</u> does not mention encryption at all, and certainly does not mention "control means" as defined in amended Claim 1. Thus, it is respectfully submitted that <u>Garib</u> does not teach "control means" as defined in amended Claim 1.

Consequently, Claim 1 (and Claims 2-12 dependent therefrom) is not anticipated by <u>Garib</u> and is patentable thereover.

With regard to the rejection of Claims 3 and 4 as unpatentable over <u>Garib</u> in view of <u>Kaufman</u>, it is noted that Claims 3 and 4 are dependent from Claim 1, and thus are believed to be patentable for at least the reasons discussed above. Further, it is respectfully submitted that <u>Kaufman</u> does not cure any of the above-noted deficiencies of <u>Garib</u>. Accordingly, it is respectfully submitted that Claims 3 and 4 are patentable over <u>Garib</u> in view of <u>Kaufman</u>.

With regard to the rejection of Claim 7 as unpatentable over <u>Garib</u> in view of <u>Kitamura</u>, it is noted that Claim 7 is dependent from Claim 1, and thus is believed to be patentable for at least the reasons discussed above. Further, it is respectfully submitted that <u>Kitamura</u> does not cure any of the above-noted deficiencies of <u>Garib</u>. Accordingly, it is respectfully submitted that Claim 7 is patentable over <u>Garib</u> in view of <u>Kitamura</u>.

With regard to the rejection of Claim 8 as unpatentable over <u>Garib</u> in view of <u>Kitamura</u> and further in view of <u>Kaufman</u>, it is noted that Claim 8 is dependent from Claim 1, and thus is believed to be patentable for at least the reasons discussed above. Further, it is respectfully submitted that <u>Kitamura</u> and <u>Kaufman</u> do not cure any of the above-noted deficiencies of <u>Garib</u>. Accordingly, it is respectfully submitted that Claim 8 is patentable over <u>Garib</u> in view of <u>Kitamura</u> and further in view of <u>Kaufman</u>.

With regard to the rejection of Claim 10 as unpatentable over <u>Garib</u> in view of <u>Schneier</u>, it is noted that Claim 10 is dependent from Claim 1, and thus is believed to be patentable for at least the reasons discussed above. Further, it is respectfully submitted that

<u>Schneier</u> does not cure any of the above-noted deficiencies of <u>Garib</u>. Accordingly, it is respectfully submitted that Claim 10 is patentable over <u>Garib</u> in view of <u>Schneier</u>.

With regard to the rejection of Claim 12 as unpatentable over <u>Garib</u> in view of <u>Inada</u>, it is noted that Claim 12 is dependent from Claim 1, and thus is believed to be patentable for at least the reasons discussed above. Further, it is respectfully submitted that <u>Inada</u> does not cure any of the above-noted deficiencies of <u>Garib</u>. Accordingly, it is respectfully submitted that Claim 12 is patentable over <u>Garib</u> in view of Inada.

New Claims 13-20 are supported at least by original Claims 1-8. New Claim 13 recites in part, "a control unit configured to control the hash value generation unit and the public key encryption processing unit, the control unit configured to suppress arithmetic operations performed by the public key encryption processing unit when the hash value generation unit accesses the storage unit."

As noted above, there is no teaching or suggestion in <u>Garib</u> for any device that suppresses arithmetic operations performed by the message preparation means 112 when the password providing means 107 accesses data storage. Thus, it is respectfully submitted that <u>Garib</u> does not teach "a control unit" as defined in new Claim 13. Consequently, new Claim 13 (and Claims 14-20 dependent therefrom) is not anticipated by <u>Garib</u> and is patentable thereover.

Application No. 10/633,658 Reply to Office Action of February 21, 2007

Accordingly, the pending claims are believed to be in condition for formal allowance.

An early and favorable action to that effect is respectfully requested.

Respectfully submitted,

OBLON, SPIVAK, McCLELLAND, MAIER & NEUSTADT, P.C.
